

Playwright Syntax

1. Overview

All objects (both types and instances) in RADRunner are stored natively in an XML dialect known as *Playwright*.

RADRunner objects can be [imported and exported from Playwright text files](#) as required. Exported text files can be edited and re-imported if desired, to replace or complement the original Playwright objects.

2. XML Schema

The XML schema for the Playwright process modelling language used by RADRunner is available online.
